AMENDMENTS TO THE CLAIMS

- 1. (original) An apparatus for luring waterfowl, the apparatus comprising:
 - a rotatable platform;
 - a force-generating unit for rotating the rotatable platform;
 - a power source for powering the force-generating unit to rotate the rotatable platform;
 - one or more support arms attached to the rotatable platform, each of said support arms including:
 - a lower end attached to the rotatable platform; and an upper end positioned above the rotatable platform; and
 - a waterfowl decoy attached to the upper end of each support arm with said decoy being positioned above the rotatable platform;
 - wherein each decoy is moved along a substantially circular path above the rotatable platform as the rotatable platform is rotated by the force-generating unit, thereby providing a lure for waterfowl.
- (original) The apparatus of claim 1 wherein said force-generating unit includes an electric motor with an output shaft attached to the rotatable platform.
- 3. (original) The apparatus of claim 1 wherein said force-generating unit includes a jet propulsion device.
- 4. (original) The apparatus of claim I wherein said power source includes a battery.
- 5. (original) The apparatus of claim 1 wherein each of said support arms includes an elongate rod having a substantially circular cross-sectional dimension.
- 6. (original) The apparatus of claim 1 wherein each of said support arms is flexible and bends when a decoy is attached to the upper end of the support arm.

(462231;)

- 7. (original) The apparatus of claim 1 wherein said waterfowl decoy includes a body portion with wings spread and extending from opposed sides of the body portion so as to simulate flight.
- 8. (original) The apparatus of claim 1, further comprising a buoyant housing to which said force-generating unit is attached.
- 9. (original) The apparatus of claim 8 wherein said rotatable platform is rigidly attached to the housing.
- 10. (original) The apparatus of claim 8, further comprising a floatation device operably associated with the buoyant housing for enhancing buoyancy of the apparatus.
- 11. (original) The apparatus of claim 8, further comprising one or more hydrodynamic drag inducing elements attached to an outer surface of the buoyant housing.
- 12. (original) The apparatus of claim 8 wherein said power supply is positioned within the buoyant housing.
- 13. (original) The apparatus of claim 12 wherein said force-generating unit is positioned within the buoyant housing.
- 14. (original) The apparatus of claim 12 wherein said force-generating unit is attached to an outer surface of the buoyant housing.
- 15. (original) The apparatus of claim 1, further comprising a controller for controlling operation of the force-generating unit.

- 16. (original) An apparatus for luring waterfowl, the apparatus comprising:
 - a rotatable platform;
 - a force-generating unit for rotating the rotatable platform;
 - a power source for powering the force-generating unit to rotate the rotatable platform; one or more support arms attached to the rotatable platform, each of said support arms including:

a lower end attached to the rotatable platform; and an upper end positioned above the rotatable platform;

wherein each of said support arms is flexible and bends when a decoy is attached to the upper end of the support arm; and

a waterfowl decoy attached to the upper end of each support arm with said decoy being positioned above the rotatable platform;

wherein each decoy is moved along a substantially circular path above the rotatable platform as the rotatable platform is rotated by the force-generating unit, thereby providing a lure for waterfowl.

- 17. (original) The apparatus of claim 16 wherein said waterfowl decoy includes a body portion with wings spread and extending from opposed sides of the body portion so as to simulate flight.
- 18. (original) The apparatus of claim 16, further comprising a buoyant housing to which said force-generating unit is attached.

- 19. (original) An apparatus for luring waterfowl, the apparatus comprising:
 - a rotatable platform;
 - a force-generating unit for rotating the rotatable platform;
 - a buoyant housing to which said force-generating unit is attached;
 - a power source for powering the force-generating unit to rotate the rotatable platform;
 - one or more support arms attached to the rotatable platform, each of said support arms including:
 - a lower end attached to the rotatable platform; and
 - an upper end positioned above the rotatable platform;
 - wherein each of said support arms is flexible and bends when a decoy is attached to the upper end of the support arm; and
 - a waterfowl decoy attached to the upper end of each support ann with said decoy being positioned above the rotatable platform;
 - wherein each decoy is moved along a substantially circular path above the rotatable platform as the rotatable platform is rotated by the force-generating unit, thereby providing a lure for waterfowl.
- 20. (presently amended) The apparatus of claim 19, further comprising a floatation device operably associated with the buoyant housing for enhancing buoyancy of the apparatus.

(462231;)
